Illustration by Patrick J. Lynch, medical illustrator

# The Female Breast

## Chest Walls and Pectoral Muscles

The female breast are located over the chest wall. The chest wall contains the ribcage and pectoral muscles. The breast itself has no muscles. Strenghteneing the muscles underneath the breast may give the appearance of a firmer and fuller breast.

## Lobules

Lobules are milk producing glands.

## Areola and Nipples

The areola is the colored area that surrounds the nipple

## Ducts

The lactiferous duct transports the milk from the lobules to the nipple

## Fatty Tissue

Fatty tissue run through out the breast and surrounds the milk glands. Fatty tissue give the breast its soft texture.

## Female Breast Cross Section.

1. Chest wall
2. Pectoral muscles
3. Lobules
4. Nipple surface
5. Areola
6. Lactiferous duct
7. Fatty tissue
8. Skin
